CAUSATIVE AGENT: 
CLEANING AGENTS

LUNG IRRITANT, LUNG SENSITIZER, SKIN IRRITANT, SKIN ALLERGEN

DEFINITION

Chemicals used for cleaning, degreasing and disinfection; workers may be exposed by inhalation or skin absorption; exposure may lead to lung irritation or sensitization (i.e. allergy) as well as skin irritation or allergy.

HEALTH EFFECTS

- Allergic contact dermatitis: an allergic reaction of the skin triggered by exposure to a chemical allergen
- Irritant contact dermatitis: a skin rash triggered by over-exposure to water, solvents, friction or contact with irritating substances (e.g. soaps, detergents)
- Occupational asthma: asthma (i.e. airway obstruction) or the exacerbation of pre-existing asthma resulting from an exposure in the workplace
- Cancer resulting from exposure to carcinogenic compounds
- Other health effects (e.g. dizziness, headaches, nosebleeds)

EXAMPLES

- Degreasers (i.e. tenside)
- Conditioner (i.e. used to remove grease and dirt from parts, equipment, tools, surfaces and materials)
- Drilling fluid
- Surfactant/
- Lime dust
- Caustic cleaner
- Detergent
- All-purpose cleaner
- Disinfectant
- Antiseptic
- Bathroom cleaner
- Bleaching agent
- Glass cleaner
- Sanitizer
- Surfactant/
- 2-butoxyethanol
- Hydrogen peroxide
- Methyl bromide
- Perchloroethylene
- Toluene
- Tributyltin oxide

KEY COMPOUNDS

Review cleaning products’ Safety Data Sheets to identify the presence of these compounds. Follow the appropriate precautionary measures.

- Acids (e.g. acetic, citric, hydrochloric, phosphoric, sulfuric)
  - Strong inorganic acid mists such as sulfuric acid, are classified by the International Agency for Research on Cancer (IARC) as Group 1 carcinogens
- Aldehydes (e.g. acetaldehyde, formaldehyde, glutaraldehyde)
  - Acetaldehyde is classified as an IARC Group 2B carcinogen
  - Formaldehyde is classified as an IARC Group 1 carcinogen
- Alkaline agents (e.g. ammonium hydroxide, carbonates, hypochlorite, monoethyamine, hydroxide, sodium :e, silicates)
- Chlorine-releasing compounds (e.g. chloramine)
- Complexing agents [e.g. ethylene diamine triethylene tetramine (EDTA), nitrilotriacetic acid (NTA)]
- Fragrance
- Glycol ethers (e.g. 2-butoxyethanol)
- Hydrogen peroxide
- Methyl bromide
- Perchloroethylene
  - Classified as an IARC Group 2A carcinogen
- Polyethylene
- Quaternary ammonium compounds (e.g. benzalkonium chloride)
- Sodium lauryl ether sulfate
- Toluene
- Tributyltin oxide

## CAUSATIVE AGENT: CLEANING AGENTS

### SECTORS

Forestry, mining, pulp and paper.

### JOBS

#### Forestry
Mechanic, cleaner/custodian, field technician, camp cook

#### Mining
Dryman/drywoman (i.e. mine janitor), cleaner/custodian, labourer, mechanic, sample preparation technician, derrickman, miner (surface and underground), oiler, service crew, camp attendant, cook

#### Pulp and Paper
Cleaner/custodian, conveyer cleaner, maintenance technician, mill operator, screen cleaner

### HOW COMMON ARE THE HEALTH EFFECTS?

The prevalence of hand dermatitis among cleaning workers was 28% compared to 18% in the control group.

### KEY PREVENTION STRATEGIES

#### Substitution
- Use products with fewer sensitizers and irritants such as certified “green cleaners” (i.e. products that are nontoxic in their undiluted form, non-corrosive, non-carcinogenic, and do not contain heavy metals or ingredients that can cause lung or skin effects)
- Use products that can be poured and wiped rather than sprayed

#### Engineering Controls
- Increase ventilation (i.e. open windows and/or doors after cleaning products have been used for approx. 1 hour; improve local or general ventilation systems)
- Use tools to prevent direct contact with cleaning agents or surfaces that have been treated

#### Administrative Controls
- Follow manufacturers’ directions (i.e. dilution ratio of cleaning solution to water)
- Avoid mixing products
- Use the lowest necessary concentration or amount
- Clean work areas when they are least occupied (i.e. after regular working hours)
- Train employees on good housekeeping practices (i.e. wet sweeping or vacuuming)

#### Personal Protective Equipment
- Use appropriate respirator and gloves (consult manufacturer)
- Avoid gloves made from natural rubber latex (if necessary, use low-protein and powder-free styles)

### OTHER CONSIDERATIONS

Even workers with little or no exposure to irritants can develop hand dermatitis as a result of prolonged friction associated with manual work.
